## Coding Standard Configuration

**Table 4.1. MISRA C:2012 Guidelines Configuration**

| Guideline | Description   | Mode     | Comment         | Enabled |
|-----------|---|----------|-----------------|---------|
| D1.1      | Any implementation-defined behaviour on which the output of the program depends shall be documented and understood.                           | required | -               | yes     |
| D2.1      | All source files shall compile without any compilation errors.  | required | -               | yes     |
| D3.1      | All code shall be traceable to documented requirements.   | required | Not enforceable | no      |
| D4.1      | Run-time failures shall be minimized.   | required | -               | yes     |
| D4.2      | All usage of assembly language should be documented.  | advisory | Not enforceable | no      |
| D4.3      | Assembly language shall be encapsulated and isolated.   | required | -               | yes     |
| D4.4      | Sections of code should not be "commented out".   | advisory | Not implemented | no      |
| D4.5      | Identifiers in the same name space with overlapping visibility should be typographically unambiguous.   | advisory | -               | no      |
| D4.6      | typedefs that indicate size and signedness should be used in place of the basic numerical types.  | advisory | -               | no      |
| D4.7      | If a function returns error information, then that error information shall be tested.   | required | -               | yes     |
| D4.8      | If a pointer to a structure or union is never dereferenced within a translation unit, then the implementation of the object should be hidden. | advisory | -               | no      |
| D4.9      | A function should be used in preference to a function-like macro where they are interchangeable.  | advisory | -               | no      |
| D4.10     | Precautions shall be taken in order to prevent the contents of a header file being included more than once.                                   | required | -               | yes     |

|       |   |          |   |     |
|-------|---|----------|---|-----|
| D4.11 | The validity of values passed to library functions shall be checked.  | required | - | yes |
| D4.12 | Dynamic memory allocation shall not be used.  | required | - | yes |
| D4.13 | Functions which are designed to provide operations on a resource should be called in an appropriate sequence.                                   | advisory | - | no  |
| D4.14 | The validity of values received from external sources shall be checked.   | required | - | yes |
| 1.1   | The program shall contain no violations of the standard C syntax and constraints, and shall not exceed the implementation's translation limits. | required | - | yes |
| 1.2   | Language extensions should not be used.   | advisory | - | no  |
| 1.3   | There shall be no occurrence of undefined or critical unspecified behaviour.  | required | - | yes |
| 2.1   | A project shall not contain unreachable code.   | required | - | yes |
| 2.2   | There shall be no dead code.  | required | - | yes |
| 2.3   | A project should not contain unused type declarations.  | advisory | - | no  |
| 2.4   | A project should not contain unused tag declarations.   | advisory | - | no  |
| 2.5   | A project should not contain unused macro declarations.   | advisory | - | no  |
| 2.6   | A function should not contain unused label declarations.  | advisory | - | no  |
| 2.7   | There should be no unused parameters in functions.  | advisory | - | no  |
| 3.1   | The character sequences /* and // shall not be used within a comment.   | required | - | yes |
| 3.2   | Line-splicing shall not be used in // comments.   | required | - | yes |
| 4.1   | Octal and hexadecimal escape sequences shall be terminated.   | required | - | yes |
| 4.2   | Trigraphs should not be used.   | advisory | - | no  |
| 5.1   | External identifiers shall be distinct.   | required | - | yes |
| 5.2   | Identifiers declared in the same scope and name space shall be distinct.  | required | - | yes |
| 5.3   | An identifier declared in an inner scope shall not hide an identifier declared in an outer scope.   | required | - | yes |
| 5.4   | Macro identifiers shall be distinct.  | required | - | yes |
| 5.5   | Identifiers shall be distinct from macro names.   | required | - | yes |
| 5.6   | A typedef name shall be a unique identifier.  | required | - | yes |
| 5.7   | A tag name shall be a unique identifier.  | required | - | yes |
| 5.8   | Identifiers that define objects or functions with external linkage shall be unique.   | required | - | yes |

|      |   |           |   |     |
|------|---|-----------|---|-----|
| 5.9  | Identifiers that define objects or functions with internal linkage should be unique.                                      | advisory  | - | no  |
| 6.1  | Bit-fields shall only be declared with an appropriate type.   | required  | - | yes |
| 6.2  | Single-bit named bit fields shall not be of a signed type.  | required  | - | yes |
| 7.1  | Octal constants shall not be used.  | required  | - | yes |
| 7.2  | A "u" or "U" suffix shall be applied to all integer constants that are represented in an unsigned type.                   | required  | - | yes |
| 7.3  | The lowercase character "l" shall not be used in a literal suffix.  | required  | - | yes |
| 7.4  | A string literal shall not be assigned to an object unless the object's type is "pointer to const-qualified char".        | required  | - | yes |
| 8.1  | Types shall be explicitly specified.  | required  | - | yes |
| 8.2  | Function types shall be in prototype form with named parameters.  | required  | - | yes |
| 8.3  | All declarations of an object or function shall use the same names and type qualifiers.                                   | required  | - | yes |
| 8.4  | A compatible declaration shall be visible when an object or function with external linkage is defined.                    | required  | - | yes |
| 8.5  | An external object or function shall be declared once in one and only one file.   | required  | - | yes |
| 8.6  | An identifier with external linkage shall have exactly one external definition.   | required  | - | yes |
| 8.7  | Functions and objects should not be defined with external linkage if they are referenced in only one translation unit.    | advisory  | - | no  |
| 8.8  | The static storage class specifier shall be used in all declarations of objects and functions that have internal linkage. | required  | - | yes |
| 8.9  | An object should be defined at block scope if its identifier only appears in a single function.                           | advisory  | - | no  |
| 8.10 | An inline function shall be declared with the static storage class.   | required  | - | yes |
| 8.11 | When an array with external linkage is declared, its size should be explicitly specified.                                 | advisory  | - | no  |
| 8.12 | Within an enumerator list, the value of an implicitly-specified enumeration constant shall be unique.                     | required  | - | yes |
| 8.13 | A pointer should point to a const-qualified type whenever possible.   | advisory  | - | no  |
| 8.14 | The restrict type qualifier shall not be used.  | required  | - | yes |
| 9.1  | The value of an object with automatic storage duration shall not be read before it has been set.                          | mandatory | - | yes |
| 9.2  | The initializer for an aggregate or union shall be enclosed in braces.  | required  | - | yes |
| 9.3  | Arrays shall not be partially initialized.  | required  | - | yes |
| 9.4  | An element of an object shall not be initialized more than once.  | required  | - | yes |

|      |   |           |   |     |
|------|---|-----------|---|-----|
| 9.5  | Where designated initializers are used to initialize an array object the size of the array shall be specified explicitly.   | required  | - | yes |
| 10.1 | Operands shall not be of an inappropriate essential type.   | required  | - | yes |
| 10.2 | Expressions of essentially character type shall not be used inappropriately in addition and subtraction operations.   | required  | - | yes |
| 10.3 | The value of an expression shall not be assigned to an object with a narrower essential type or of a different essential type category.   | required  | - | yes |
| 10.4 | Both operands of an operator in which the usual arithmetic conversions are performed shall have the same essential type category.   | required  | - | yes |
| 10.5 | The value of an expression should not be cast to an inappropriate essential type.   | advisory  | - | no  |
| 10.6 | The value of a composite expression shall not be assigned to an object with wider essential type.   | required  | - | yes |
| 10.7 | If a composite expression is used as one operand of an operator in which the usual arithmetic conversions are performed then the other operand shall not have wider essential type. | required  | - | yes |
| 10.8 | The value of a composite expression shall not be cast to a different essential type category or a wider essential type.   | required  | - | yes |
| 11.1 | Conversions shall not be performed between a pointer to a function and any other type.  | required  | - | yes |
| 11.2 | Conversions shall not be performed between a pointer to an incomplete type and any other type.  | required  | - | yes |
| 11.3 | A cast shall not be performed between a pointer to object type and a pointer to a different object type.  | required  | - | yes |
| 11.4 | A conversion should not be performed between a pointer to object and an integer type.   | advisory  | - | no  |
| 11.5 | A conversion should not be performed from pointer to void into pointer to object.   | advisory  | - | no  |
| 11.6 | A cast shall not be performed between pointer to void and an arithmetic type.   | required  | - | yes |
| 11.7 | A cast shall not be performed between pointer to object and a non-integer arithmetic type.  | required  | - | yes |
| 11.8 | A cast shall not remove any const or volatile qualification from the type pointed to by a pointer.  | required  | - | yes |
| 11.9 | The macro NULL shall be the only permitted form of integer null pointer constant.   | required  | - | yes |
| 12.1 | The precedence of operators within expressions should be made explicit.   | advisory  | - | no  |
| 12.2 | The right hand operand of a shift operator shall lie in the range zero to one less than the width in bits of the essential type of the left hand operand.                           | required  | - | yes |
| 12.3 | The comma operator should not be used   | advisory  | - | no  |
| 12.4 | Evaluation of constant expressions should not lead to unsigned integer wrap-around.   | advisory  | - | no  |
| 12.5 | The sizeof operator shall not have an operand which is a function parameter declared as "array of   | mandatory | - | yes |

|      |  |           |   |     |
|------|--|-----------|---|-----|
|      | type".   |           |   |     |
| 13.1 | Initializer lists shall not contain persistent side effects.   | required  | - | yes |
| 13.2 | The value of an expression and its persistent side effects shall be the same under all permitted evaluation orders.  | required  | - | yes |
| 13.3 | A full expression containing an increment (++) or decrement (--) operator should have no other potential side effects other than that caused by the increment or decrement operator. | advisory  | - | no  |
| 13.4 | The result of an assignment operator should not be used.   | advisory  | - | no  |
| 13.5 | The right hand operand of a logical && or    operator shall not contain persistent side effects.   | required  | - | yes |
| 13.6 | The operand of the sizeof operator shall not contain any expression which has potential side effects.  | mandatory | - | yes |
| 14.1 | A loop counter shall not have essentially floating type.   | required  | - | yes |
| 14.2 | A for loop shall be well-formed.   | required  | - | yes |
| 14.3 | Controlling expressions shall not be invariant.  | required  | - | yes |
| 14.4 | The controlling expression of an if statement and the controlling expression of an iteration-statement shall have essentially Boolean type.  | required  | - | yes |
| 15.1 | The goto statement should not be used.   | advisory  | - | no  |
| 15.2 | The goto statement shall jump to a label declared later in the same function.  | required  | - | yes |
| 15.3 | Any label referenced by a goto statement shall be declared in the same block, or in any block enclosing the goto statement.  | required  | - | yes |
| 15.4 | There should be no more than one break or goto statement used to terminate any iteration statement.  | advisory  | - | no  |
| 15.5 | A function should have a single point of exit at the end.  | advisory  | - | no  |
| 15.6 | The body of an iteration-statement or a selection-statement shall be a compound-statement.   | required  | - | yes |
| 15.7 | All if ... else if constructs shall be terminated with an else statement.  | required  | - | yes |
| 16.1 | All switch statements shall be well-formed.  | required  | - | yes |
| 16.2 | A switch label shall only be used when the most closely-enclosing compound statement is the body of a switch statement.  | required  | - | yes |
| 16.3 | An unconditional break statement shall terminate every switch-clause.  | required  | - | yes |
| 16.4 | Every switch statement shall have a default label.   | required  | - | yes |
| 16.5 | A default label shall appear as either the first or the last switch label of a switch statement.   | required  | - | yes |
| 16.6 | Every switch statement shall have at least two switch-clauses.   | required  | - | yes |

|      |   |           |   |     |
|------|---|-----------|---|-----|
| 16.7 | A switch-expression shall not have essentially Boolean type.  | required  | - | yes |
| 17.1 | The features of <stdarg.h> shall not be used.   | required  | - | yes |
| 17.2 | Functions shall not call themselves, either directly or indirectly.   | required  | - | yes |
| 17.3 | A function shall not be declared implicitly.  | mandatory | - | yes |
| 17.4 | All exit paths from a function with non-void return type shall have an explicit return statement with an expression.                            | mandatory | - | yes |
| 17.5 | The function argument corresponding to a parameter declared to have an array type shall have an appropriate number of elements.                 | advisory  | - | no  |
| 17.6 | The declaration of an array parameter shall not contain the static keyword between the [ ].   | mandatory | - | yes |
| 17.7 | The value returned by a function having non-void return type shall be used.   | required  | - | yes |
| 17.8 | A function parameter should not be modified.  | advisory  | - | no  |
| 18.1 | A pointer resulting from arithmetic on a pointer operand shall address an element of the same array as that pointer operand.                    | required  | - | yes |
| 18.2 | Subtraction between pointers shall only be applied to pointers that address elements of the same array.   | required  | - | yes |
| 18.3 | The relational operators >, >=, < and <= shall not be applied to objects of pointer type except where they point into the same object.          | required  | - | yes |
| 18.4 | The +, -, += and -= operators should not be applied to an expression of pointer type.   | advisory  | - | no  |
| 18.5 | Declarations should contain no more than two levels of pointer nesting.   | advisory  | - | no  |
| 18.6 | The address of an object with automatic storage shall not be copied to another object that persists after the first object has ceased to exist. | required  | - | yes |
| 18.7 | Flexible array members shall not be declared.   | required  | - | yes |
| 18.8 | Variable-length array types shall not be used.  | required  | - | yes |
| 19.1 | An object shall not be assigned or copied to an overlapping object.   | mandatory | - | yes |
| 19.2 | The union keyword should not be used.   | advisory  | - | no  |
| 20.1 | #include directives should only be preceded by preprocessor directives or comments.   | advisory  | - | no  |
| 20.2 | The ', " or \ characters and the /* or // character sequences shall not occur in a header file name.  | required  | - | yes |
| 20.3 | The #include directive shall be followed by either a <filename> or "filename"sequence.  | required  | - | yes |
| 20.4 | A macro shall not be defined with the same name as a keyword.   | required  | - | yes |

|       |   |           |   |     |
|-------|---|-----------|---|-----|
| 20.5  | #undef should not be used.  | advisory  | - | no  |
| 20.6  | Tokens that look like a preprocessing directive shall not occur within a macro argument.  | required  | - | yes |
| 20.7  | Expressions resulting from the expansion of macro parameters shall be enclosed in parentheses.  | required  | - | yes |
| 20.8  | The controlling expression of a #if or #elif preprocessing directive shall evaluate to 0 or 1.  | required  | - | yes |
| 20.9  | All identifiers used in the controlling expression of #if or #elif preprocessing directives shall be #define'd before evaluation.   | required  | - | yes |
| 20.10 | The # and ## preprocessor operators should not be used.   | advisory  | - | no  |
| 20.11 | A macro parameter immediately following a # operator shall not immediately be followed by a ## operator.  | required  | - | yes |
| 20.12 | A macro parameter used as an operand to the # or ## operators, which is itself subject to further macro replacement, shall only be used as an operand to these operators. | required  | - | yes |
| 20.13 | A line whose first token is # shall be a valid preprocessing directive.   | required  | - | yes |
| 20.14 | All #else, #elif and #endif preprocessor directives shall reside in the same file as the #if, #ifdef or #ifndef directive to which they are related.                      | required  | - | yes |
| 21.1  | #define and #undef shall not be used on a reserved identifier or reserved macro name.   | required  | - | yes |
| 21.2  | A reserved identifier or macro name shall not be declared.  | required  | - | yes |
| 21.3  | The memory allocation and deallocation functions of <stdlib.h> shall not be used.   | required  | - | yes |
| 21.4  | The standard header file <setjmp.h> shall not be used.  | required  | - | yes |
| 21.5  | The standard header file <signal.h> shall not be used.  | required  | - | yes |
| 21.6  | The Standard Library input/output functions shall not be used.  | required  | - | yes |
| 21.7  | The atof, atoi, atol, and atoll functions of <stdlib.h> shall not be used.  | required  | - | yes |
| 21.8  | The library functions abort, exit and system of <stdlib.h> shall not be used.   | required  | - | yes |
| 21.9  | The library functions bsearch and qsort of <stdlib.h> shall not be used.  | required  | - | yes |
| 21.10 | The Standard Library time and date functions shall not be used.   | required  | - | yes |
| 21.11 | The standard header file <tgmath.h> shall not be used.  | required  | - | yes |
| 21.12 | The exception handling features of <fenv.h> should not be used.   | advisory  | - | no  |
| 21.13 | Any value passed to a function in <ctype.h> shall be representable as an unsigned char or be the value EOF.   | mandatory | - | yes |
| 21.14 | The Standard Library function memcmp shall not be used to compare null terminated strings.  | required  | - | yes |

|       |  |           |   |     |
|-------|--|-----------|---|-----|
| 21.15 | The pointer arguments to the Standard Library functions memcpy, memmove and memcmp shall be pointers to qualified or unqualified versions of compatible types.   | required  | - | yes |
| 21.16 | The pointer arguments to the Standard Library function memcmp shall point to either a pointer type, an essentially signed type, an essentially unsigned type, an essentially Boolean type or an essentially enum type. | required  | - | yes |
| 21.17 | Use of the string handling functions from <string.h> shall not result in accesses beyond the bounds of the objects referenced by their pointer parameters.   | mandatory | - | yes |
| 21.18 | The size_t argument passed to any function in <string.h> shall have an appropriate value.  | mandatory | - | yes |
| 21.19 | The pointers returned by the Standard Library functions localeconv, getenv, setlocale or, strerror shall only be used as if they have pointer to const-qualified type.   | mandatory | - | yes |
| 21.20 | The pointer returned by the Standard Library functions asctime, ctime, gmtime, localtime, localeconv, getenv, setlocale or strerror shall not be used following a subsequent call to the same function.                | mandatory | - | yes |
| 22.1  | All resources obtained dynamically by means of Standard Library functions shall be explicitly released.  | required  | - | yes |
| 22.2  | A block of memory shall only be freed if it was allocated by means of a Standard Library function.   | mandatory | - | yes |
| 22.3  | The same file shall not be open for read and write access at the same time on different streams.   | required  | - | yes |
| 22.4  | There shall be no attempt to write to a stream which has been opened as read-only.   | mandatory | - | yes |
| 22.5  | A pointer to a FILE object shall not be dereferenced.  | mandatory | - | yes |
| 22.6  | The value of a pointer to a FILE shall not be used after the associated stream has been closed.  | mandatory | - | yes |
| 22.7  | The macro EOF shall only be compared with the unmodified return value from any Standard Library function capable of returning EOF.   | required  | - | yes |
| 22.8  | The value of errno shall be set to zero prior to a call to an errno-setting-function.  | required  | - | yes |
| 22.9  | The value of errno shall be tested against zero after calling an errno-setting-function.   | required  | - | yes |
| 22.10 | The value of errno shall only be tested when the last function to be called was an errno-setting-function.   | required  | - | yes |
